Brazilian Import Legislation - Update

Last night after a meeting between ANFAVAE (the car makers association) and the Brazilian government, it was agreed to suspend the Import License requirement for many automotive parts imported in to Brazil.

The exceptions to this revised agreement are products classified under harmonised tariff codes that begin with the following numbers:

73 (clamps, circlips, steel tubes)
34 and 27 (automotive grease)

Please rest assured that GKN Freight Services are closely monitoring the situation and are in direct contact with all relevant customers. We will keep you informed of any further developments, however, do not hesitate to contact us if you have any further queries.
